

Aditinet, VMware e Palo Alto Networks

Software-Defined IT in azione!

Napoli, 26 Febbraio 2016

Primo Bonacina

Managing Partner
PBS – Primo Bonacina Services

**VMware e Palo Alto Networks con Aditinet: Software-Defined IT
in azione!**

Partecipa a questo incontro per scoprire come la Rete governata dal Software può migliorare drasticamente il livello di protezione e agilità delle applicazioni

L'agenda della mattinata

Quando e Dove

Napoli

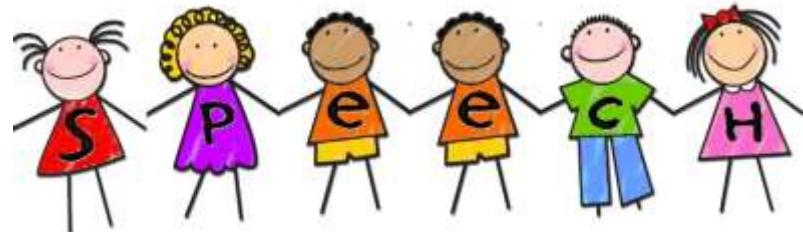

Venerdì 26 Febbraio 2016 – Eccellenze Campane
Via Benedetto Brin 49 C/o Complesso Brin 69

L'evento si rivolge a

CIO, CISO, Responsabili IT, Responsabili Sicurezza, Responsabili della Rete di aziende private e pubbliche di medio grandi dimensioni.

Agenda

- 9:15** Benvenuto e Registrazione
- 10:00** Software-Defined IT: Siamo pronti? (**Primo Bonacina**, PBS – Primo Bonacina Services)
- 10:25** Aditinet e la strategia verso il Software-Defined IT (**Paolo Marsella**, CEO, Aditinet)
- 10:50** VMware NSX, la piattaforma di sicurezza e virtualizzazione della rete: Agilità e Operations, Sicurezza e Segmentazione (**Luca Morelli**, VMware)
- 11:30** Next-Generation Security per il Software-Defined IT (**Domenico Stranieri**, Palo Alto Networks)
- 12:10** Software-Defined IT in azione: come integrare le migliori tecnologie per le nuove infrastrutture (**Enrico Nasi e Matteo Indennimeo**, Aditinet)
- 12:50** Q&A e Lunch

Oggi parliamo di Software-Defined IT

The screenshot shows a web browser window with the URL <http://dupress.com/articles/tech-trends-2015-software-defined-env>. The page is from the Deloitte University Press and features a large graphic with the text "Software-defined everything" and "Breaking virtualization's final frontier". The graphic includes binary code, gears, and a checkmark icon. The browser toolbar at the top shows various icons and links related to software-defined IT.

Much of the operating environment can now be virtualized, automated, and orchestrated, positioning infrastructure as a competitive differentiator that can help fuel innovation.

General Motors says it owns your car's software

In Copyright Dispute, GM Attorney Says Customers Just License Vehicle Use

Buy a General Motors vehicle lately? Check the fine print. The company says you may not own some parts of a vehicle that actually make it run.

g+ 

Pete Bigelow

In comments sure to rankle customers, a GM attorney said Tuesday the company believes the software that controls every vehicle function belongs to them. Even after customers pay tens of thousands of dollars for a car, the company says users are merely signing a licensing agreement to use it over its lifetime.

"It is our position the software in the vehicle is licensed by the owner of the vehicle," Harry Lightsey said.

90% OF WORLD'S DATA CREATED IN LAST TWO YEARS

April 13, 2015

Melissa Di Donato, head of European Channels & ISV Programs at Salesforce.com says that a connected environment would mean connected sales teams, digital sales aids and an integrated customer platform as part of the broader pattern. "The world has gone social with 2.3 billion social users, but companies are building their own social networks in the form of communities," and channels would need to adapt to this.

"Cloud offers us not just a different way of using technology, but a new way for customers to buy, customers look to us to offer a new way to buy. Internet of Things is a way of communicating and connecting; we are now in the era of billions of connected devices," she said at the European Software and Solutions Summit on March 25 in London.

"Salesforce CEO Marc Benioff gave us this quote not so long ago: 'The Internet of Things is ground zero for this new phase of global transformation, powered by technology innovation.' What this is going to do is generate significant change, economically to our society, and both the way we deliver and buy solutions."

There is a lot going on in big data: 90% of the world's data was created in the last two years, she says. By 2020 there will be ten times the current amount of mobile data, much of it unstructured. This needs to be found and used in business decisions.

Marc Andreessen lo diceva già nel 2011!

Why Software Is Eating The World

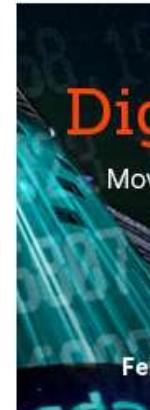

By MARC ANDREESSEN

August 20, 2011

This week, Hewlett-Packard (where I am on the board) announced that it is exploring jettisoning its struggling PC business in favor of investing more heavily in software, where it sees better potential for growth. Meanwhile, Google plans to buy up the cellphone handset maker Motorola Mobility. Both moves surprised the tech world. But both moves are also in line with a trend I've observed, one that makes me optimistic about the future growth of the American and world economies, despite the recent turmoil in the stock market.

In an interview with WSJ's Kevin Delaney, Groupon and LinkedIn investor Marc Andreessen insists that the recent popularity of tech companies does not constitute a bubble. He also stressed that both Apple and Google are undervalued and that "the market doesn't like tech."

In short, software is eating the world.

More than 10 years after the peak of the 1990s dot-com bubble, a dozen or so new Internet companies like Facebook and Twitter are sparking controversy in Silicon Valley, due to their rapidly growing private market valuations,

E nel 2012 ...

The screenshot shows a web page from [theMETISfiles](#), a source of thought leadership in technology. The page features a navigation bar with links to Home, Research, Thought Leadership, Opinion, Consulting, Cloudscape, and Customer. Below the navigation are three sub-links: Elastic Enterprise, Connected Worker, and Partner Ecosystem. The main content area displays an article titled "The Future Of The Network Is Software Defined" by Pim Bilderbeek on 04/10/2012. The article discusses a debate session at the NetEvents EMEA Press and Analyst Summit on Software Defined Networks (SDN), featuring panellists from Gartner, IDC, IBM, Dell, HP, Extreme Networks, Enterasys, and others. It questions who will lead the SDN revolution. A sidebar on the left contains two orange circular icons with checkmarks, likely indicating continuation or next steps.

The Future Of The Network Is Software Defined

Written by Pim Bilderbeek on 04/10/2012

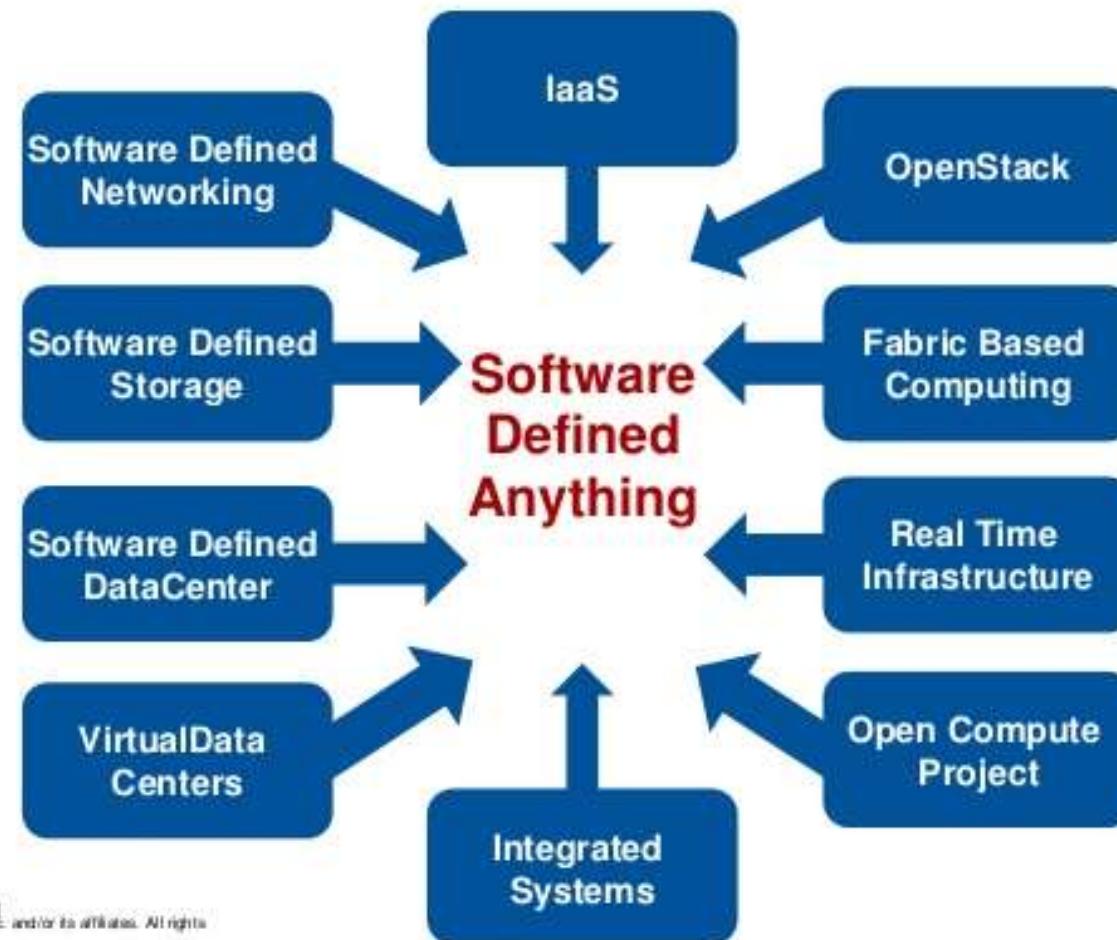

Last week we attended the [NetEvents](#) EMEA Press and Analyst Summit. Part of the 2-day program was a debate session on [Software Defined Networks](#) (SDN) with panellists from Gartner, IDC, IBM, Dell, HP, Extreme Networks, Enterasys and yours truly. The debate centred on the question who is first to ride the SDN revolution, the Enterprise, the Cloud Data Centre, or the Service Provider (and where is it taking them)?

What is SDN?

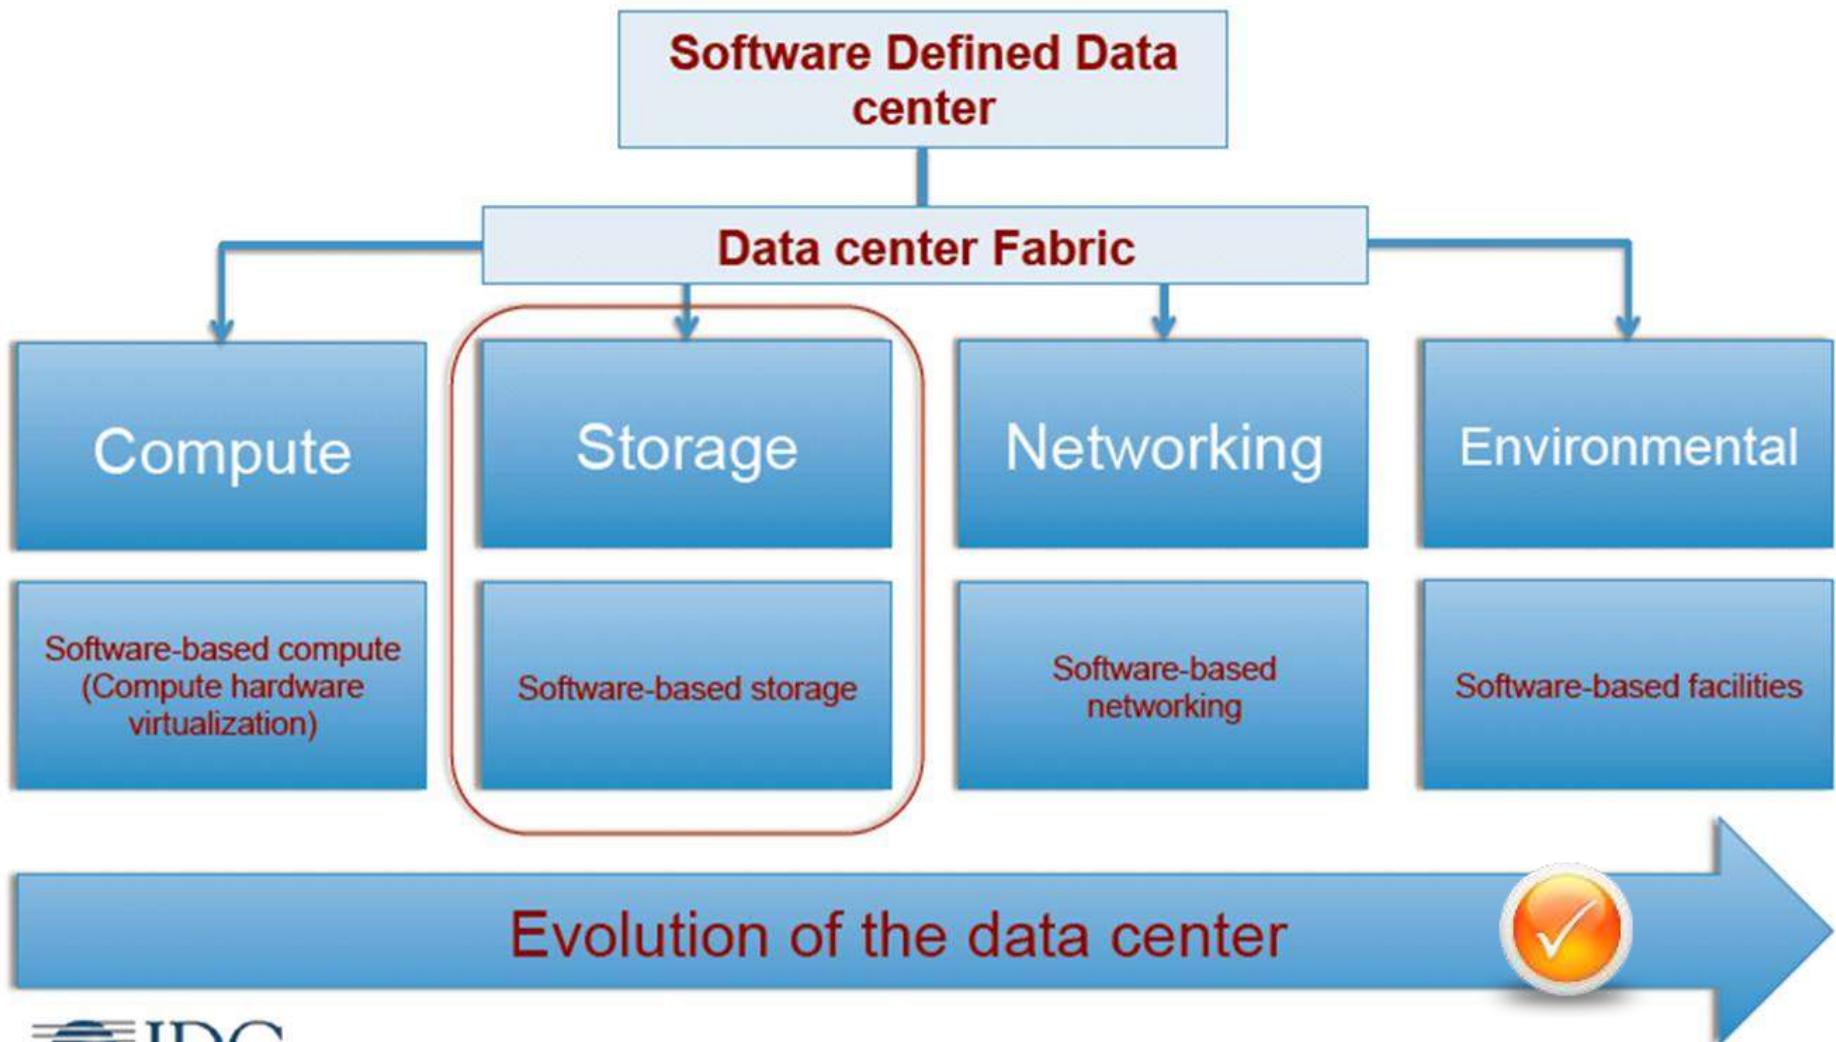

SDN is about separating the network router and switch data plane (hardware that does packet forwarding) from the control plane (logic that controls packet forwarding). In SDN the control path decisions are taken out of the switch and managed by software on a centralised server. In other words, SDN is about providing a programmable interface into the infrastructure to modify the network infrastructure behaviour and delegate the capability of modifying that to other IT systems. The

La crescita di fenomeni quali l'iperconvergenza, il Software-Defined IT e la disponibilità di servizi Cloud sempre più evoluti ed erogabili in modalità self-provisioning consentono oggi a un numero crescente di aziende un approccio diverso all'IT aziendale; un approccio più in linea con le esigenze di un business che richiede un'infrastruttura IT agile e che deve reagire il più rapidamente possibile a esigenze mutevoli.

Le organizzazioni vogliono infatti mantenere i costi sotto controllo, ma al contempo erogare più servizi, in sicurezza ed efficienza e quello che prima sembrava difficile da realizzare oggi sembra alla portata di mano grazie all'utilizzo delle nuove soluzioni pilotate dal software infrastrutturale, accoppiate ad iperconvergenza, hardware industry-standard e cloud.

Secondo questo nuovo paradigma, gli elementi essenziali per l'infrastruttura IT (server, storage, networking, sicurezza, ...) sono messi in comune, virtualizzati, acceduti e gestiti attraverso un insieme comuni di API con vantaggi in termini di governance e gestione. Tutto questo porta ad un crescente utilizzo di hardware più economico e facilmente manutenibile mentre l'intelligenza, la gestione, i servizi si spostano nel software e nel cloud, con un preciso risparmio in termini di TCO.

Ma se da una lato questa nuova modalità di pensare e realizzare le architetture IT già sta offrendo in alcune aree dei significativi benefici, d'altra parte non pochi sono gli aspetti di tipo tecnologico, architettonico e di business da mettere a fuoco.

Software defined IT: quali sono gli standard e paradigmi che si stanno affermando? Quali ecosistemi si stanno formando? Quale è il ruolo dell'Open Source nel Software-Defined IT? Soluzioni Iperconvergenti, quali sono i benefici derivanti dal loro utilizzo e per quali ambienti sono adatte? In questo nuovo paradigma l'hardware diventa quindi davvero una commodity? Quale è il nuovo ruolo del Cloud? Le nuove infrastrutture saranno sempre più ibride? Cosa resta in azienda? Cosa ne esce? Come gestisco la nuova infrastruttura? Chi ne garantisce le performance? Quali sono gli SLA e come li misuro? Come ne garantisco la sicurezza? In questo nuovo mondo, quale è il ruolo del system integrator? Del Service Provider? Del Cloud Provider?

Questi sono alcuni dei temi posti al centro del convegno, che si svilupperà nella formula della sessione plenaria e che si avvale della presenza di ospiti e
